RADIO BROADCAST OF ALPHANUMERIC INFORMATION
DIFFUSION DES INFORMATIONS ALPHANUMERIQUES PAR RADIO

Chapter 2- Alphanumeric Information

This part contains details of radio broadcasts of alphanumeric information. The following presentation has been adopted:

1 GENERAL

The headings of the transmission programmes start with the name of the country and the name of the transmitting centre. Further information contained in the headings of transmission programmes is presented in one of the different arrangements described in the following paragraphs.

2 ARRANGEMENT OF THE CONTENTS OF THE RTT BROADCASTS

The headings of the programmes of RTT broadcasts are completed by the following information:

Specific area(s) in which broadcasts are intended to be received:

Technical specifications:

I. TECHNICAL SPECIFICATIONS — CARACTÉRISTIQUES TECHNIQUES

(a)	(b)		(c)		(d)
Call sign Indicatif d'appel	Hours of operation Heures d'utilisation	Frequency Fréquence	Class of emission Catégorie d'émission	Band width Largeur de bande	Power supplied to the antenna Puissance fournie à l'antenne

Note: Column (b) indicates, when appropriate, the hours of operation of the various frequencies. Any seasonal variations are also shown.

2.1 Data transmission programmes

The information is presented in columns as shown below. To save space each line normally contains information relative to two bulletins. The reading sequence of the schedule is therefore line by line.

1		2	3	4
Abbreviated Heading En-tête abrégé		Time Group Groupe Horaire	Transmission time Heure de transmission	Details Contenu
TTAAii	CCCC	(GG)	(UTC)	

2.2 Abbreviated heading (column 1)

This column shows for each bulletin included in the programme the data type and geographical designators (TTAAii) and international four-letter location indicator (CCCC) of the centre originating or compiling the bulletin. Full details as regards abbreviated headings are given in paragraph 2.3.2 of Part II of Volume I of *WMO Publication No. 386 - Manual on the Global Telecommunication System*. The table of the international location indicators is given in the annex I to Volume C1.

2.3 Time group (GG) (column 2)

This column indicates the following:

(a) For bulletins containing meteorological reports intended for standard time of observations, the standard time of observation in UTC;

(b) For aerodrome, route and area (aeronautical) forecasts: the full hour in UTC preceding the transmission time; for other forecasts and analyses: standard time of observation in UTC on which the forecast or analysis is based;

(c) For other messages the time of compilation in UTC.

2.4 Transmission time (column 3)

This column gives each bulletin or group of bulletins, when applicable, the time at which the transmission begins, or the times of beginning and ending of the transmission if both have been specified. Bulletins or groups of bulletins are normally transmitted at several fixed times during the day. Therefore, to avoid repetition, transmission times are given, whenever possible, in the cyclic form HH, H+ ... minutes. The symbol HH denotes the main and intermediate standard times of observation, H the whole hours, S the half hours, which are specified in the cycle headings of the schedule (e.g. HH = 0000, 0600, 1200, 1800; H = 0000-2400). All the times published are indicated in Universal Time Coordinated (UTC). On several data distribution systems, bulletins are transmitted as soon as available, and transmission schedule cannot therefore be defined.

2.5 Transmission time (column 4)

This column specifies details of the contents.

Centre: Alger (AFMET VI)

Area in which the broadcast is received: Equator-45°N, 30°E-20°W

		Area coverage	The area in which the broadcast is intended to bereceived. This can include geographical co-ordinates or a geographical area.
I	**(a)**	Frequency	Refers to the centre value about which the frequency shift takes place.
	(b)	Band width	Frequency shift
	(c)	Call Sign	Can either be the Name of the call sign of the Station
	(d)	Class of Emission	This column specifies the class of emission of the frequencies indicated under the column "Frequency used". The following symbols are used **AMPLITUDE MODULATION** A1A Telegraphy without the use of a modulating audio frequency (by on-off keying) A2A Telegraphy by the on-off keying of an amplitude-modulating audio frequency of audio frequencies, or by the on-off keying of the modulated emission (special case: an unkeyed emission amplitude modulated) A3E Telephony, double sideband R3E Telephony, single sideband, reduced carrier H3E Telephony, single sideband, full carrier J3E Telephony, single sideband, suppressed carrier B9W Combination of telephony and telegraphy (two independent sidebands) *FREQUENCY MODULATION* F1B Telegraphy by frequency shift keying without the use of a modulating audio frequency, one of two frequencies being emitted at any instant F3E Telephony, by direct frequency modulation of the carrier
	(f)	Hours of operation	When appropriate this column indicates the hours of operation, in UTC, of the various frequencies. Any seasonal variations are also shown **eg H24, 0600-1600, Summer, June-December**
II	**(a)**	Area	The map area refers to table "II. MAP AREA"
	(b)	Projection	Projection type eg Mercator, Lambert's Conical Orthomorphic, Polar Stereographic
	(c)	Scale	Indicates the scale of the map eg. 1:6,000,000 true at 60°N (45 cm x 55 cm)
III	**(a)**	Transmission time	This column gives the time at which the transmission is scheduled to begin. 0600(00) The times at which the observations contained in the chart were made are presented in parentheses.
	(b)	TTAAii	Abbreviated heading - data type and geographical designators.
	(c)	CCCC	International four letter location indicator of the centre originating the chart.
	(d)	Map area	For each chart transmitted this column gives a letter/digit which corresponds to the area covered. The map areas corresponding to the letters are indicated at the beginning of the schedule. See table II – Map Area
	(e)	Details of chart	This column specifies details of the content of the chart eg: H+24 surface prognosis / Indian Ocean analysis / Test chart
	(e)	Drum speed	This relates to the drum speed, in revolutions per minute, and the Index of co-operation, which is generally 576. For complementary information see "WMO Publication No. 386 - *Manual on the Global Telecommunication System, Volume"*
